STAR WARS HEROES

We want you to develop a small single page app, that shows us all the information related to a character from the Star Wars universe.

Basically, the user submits the name of the character he is looking for, in order to see all the relevant information in a dedicated area.

The User Interface should look like the one shown on page 2, feel free to innovate ☺

We only need you to create the frontend app. You can use the API available here:
https://swapi.dev/documentation - start

Here's an example of a query containing all the characters:
https://swapi.dev/api/people/

The web app must be written using ReactJS and must have relevant unit test coverage.

As delivery we are expecting the source code and some instructions to:
- Run the app
- Run the unit tests
- Build a production version of the app ready for deployment

The work will be evaluated according to the following criteria:
- Correct use of React and JS (ES6+) best practices
- Code readability and maintainability
- Relevance of the unit tests

Bonus points if:
- The app is built with Typescript

Good luck!

STAR WARS HEROES

Character Name

Luke Skywalker

SEARCH

Luke Skywalker

Gender	Male
Birth year	19 BBY
Height	172
Mass	77
Hair Color	Blond
